

FLOW-CRETE JACKING PIPE

Single-pass pressure pipe for water and sewer applications.

Fiberglass-lined microtunnel RCP internal construction

- ✓ Computer-controlled batching maintains consistency and provides uniform jacking loads for each pipe.
- ✓ Higher compressive strength mixes can be formulated to increase the allowable jacking forces, which provides the ability for longer drives.
- ✓ The fiberglass pressure joint system is cast inside the Flow-Crete™ creating a pressure-rated, microtunneling pipe.
- ✓ Flow-Crete™ is designed and manufactured to each customer specification and project.

The graphic is an example.
The joint design can be
customized to each project.
